

The GAIA ecosystem

Bringing balance to industry and ecology by incentivizing environmentalism with cryptocurrency

mission

To change our communities' relationship with the environment by inspiring, supporting, and promoting environmental action through Blockchain technology.

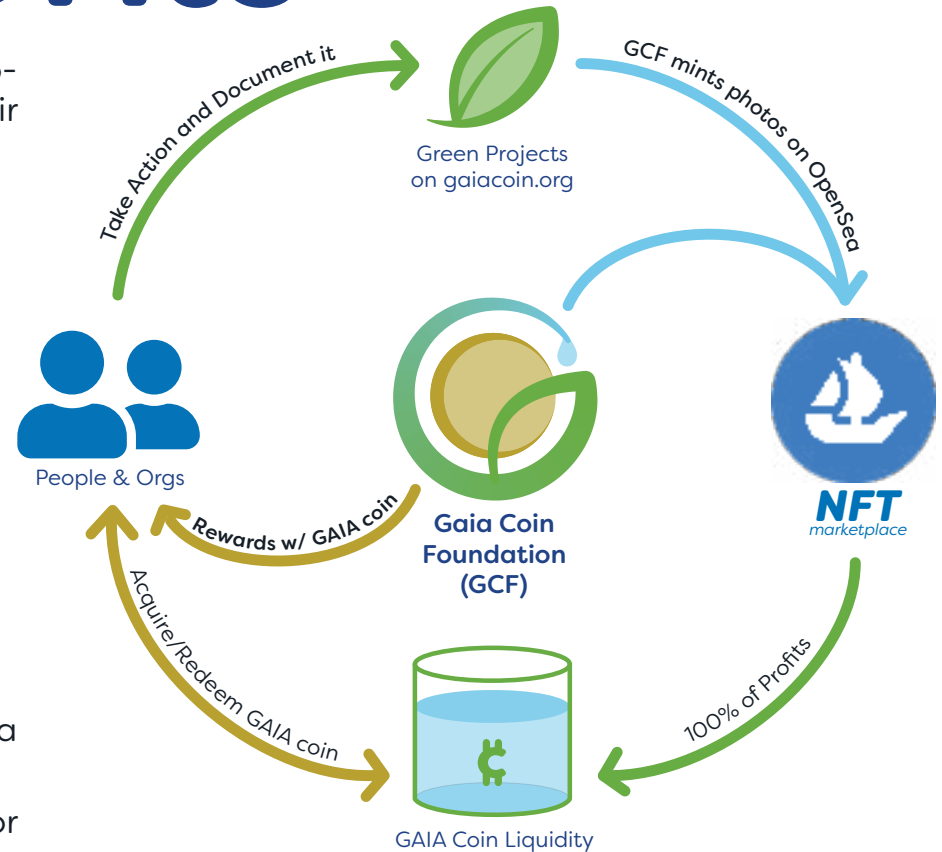

vision

A world in which the environment is valued and not exploited. One where environmental enhancement does not impede business, but strengthens it through partnership and action.

How it works

- Individuals or organizations with a pro-environmental Green Project will submit their project online at gaiacoin.org
- Green Projects that are approved will receive some marketing and/or sponsorship through GCF
- Participants will take photos to document the project, submit them to GCF, and then be rewarded with GAIA coin
- GCF will mint an NFT of the environmental action that includes all relevant documentation - this is the **proof-of-principle** that gets recorded on the blockchain when the NFT is minted
- The NFT will then be available for public auction to the highest bidder on the OpenSea marketplace
- 100% of profits from the auction will go into a liquidity pool that will set the value of GAIA coin
- GAIA coin holders may swap their GAIA coin for crypto assets, or vice versa

Gaia Coin Tokenomics Model

Get involved

Green Projects

Have an idea for an environmental project and want our help? Submit your vision on our website. If selected and completed, you and your participants will receive GAIA Coins

[I want to submit my project!](#)

Volunteer

Have you ever wanted to join an environmental cause or learn more about cryptocurrency? We would love your helping hand in making our mission a reality.

About us

The Gaia hypothesis, also known as Gaia theory or Gaia principle, proposes that all organisms and their inorganic surroundings on Earth are closely integrated.

We are a grassroots non-profit organization located in Greensboro NC. Our members share a common passion for the environment. We envision a different world than the one we currently experience.

One where cash is no longer king. One where forming partnerships with each other to preserve and enhance our natural resources is the driving motivation behind economics. We want to show the world that enhancing the environment is the ultimate creation of virtue and value. We are building GAIA.

Build it with us.
